### Title- Website for Tribal

#### PROBLEM STATEMENT

To develop a website which will provide information of different government schemes to the users. To develop a database filtering system which will work on the data given by the user.

#### AIM & OBJECTIVE

Tribals are the weaker section of society. There are various schemes which are helpful to them and other people. The main objective of the project is to make people aware of the government schemes. With the help of this website people would be able to filter out the schemes on the basis of gender, age, education etc.

#### EXPECTED OUTCOME

The expected outcome of the project is that the website should be in marathi language so that more people can be in contact with it. People can also give suggestions in the suggestion box by informing with more schemes or with other things. The main outcome of this project is to filter out schemes on the basis of gender, age, education, employment etc. with the help of a database

#### LITERATURE REVIEW

Some of articles on tribal development and on web development using html php were referred.

Sumit Kumar Minz “Tribal Development Policies in India: Its Implications and Prospects”[1]

Dr. neera Gautam “Education of Scheduled Tribe in India: Schemes and Programmes”[2]

\*Dr. Ramesh H. Makwana “AN IMPACT OF TRIBAL SUB-PLAN SCHEME ON TRIBAL COMMUNITY: A SOCIOLOGICAL STUDY International Journal of Development Research”[3]

PunamKumari”A Research Paper OnWebsite Development OptimizationUsing Xampp/PHP” International Journal of Advanced Research in Computer Science.[4]

## APPLICATION AREA

There is a huge economic disparity in our society. To reduce that, the government is coming up with new schemes to encourage and empower their people. Tribes have remained as the isolated part of society. So the government came up with some beneficial schemes for them which help in their economic and social development. This website can be used by the people for checking out those schemes and they can filter out the schemes on the basis of their gender, age etc. So with the help of this website people would be informed about the schemes. This website is very user friendly and efficient.

## SOFTWARE USED

Programming languages like HTML, Php and CSS are used to develop the website. A database is created in MYSQL on the localhost server. Sublime text editor is used to edit/write the code.

## ALGORITHM

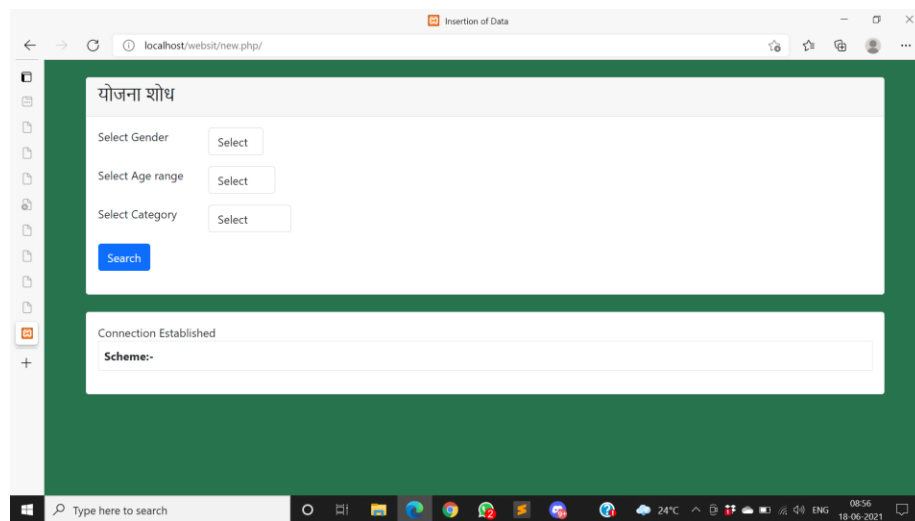

Following were the steps involved in creation of this website.

1. To create a database on a localhost server in phpmyadmin.
2. To create a form in Php which will help in inserting values in the database.
3. To link the form with the database using query instructions.
4. Inserting the details of schemes such as gender, age factors, education etc.

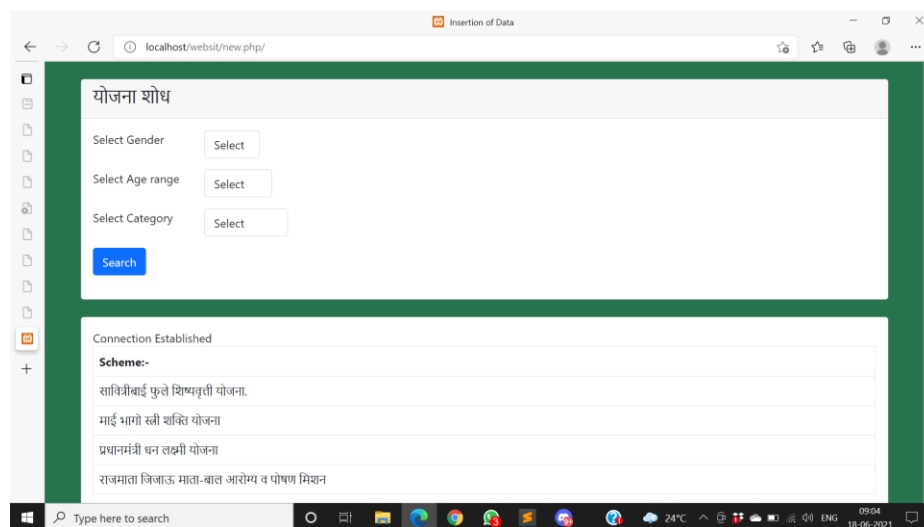

5. To design the front end of a website including the home page, Filter search page, Suggestion page etc.
6. To link the filter search webpage with the database and check its working.

## TESTING OF THE WEBSITE

The testing of the website is completed. Some errors were faced such as wrong schemes were displayed on the filter search web page etc.. Lets see the working of the filter search system.

This is the webpage of the Filter search system. Here user can select his details and search for schemes. For eg if I search for female schemes then it will display all the schemes for females.

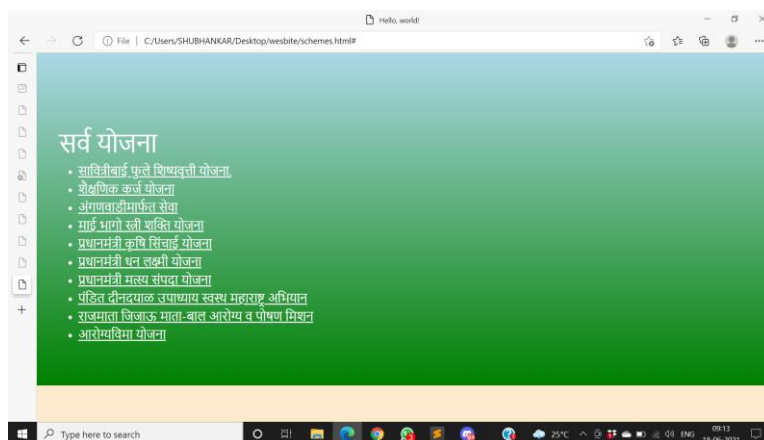

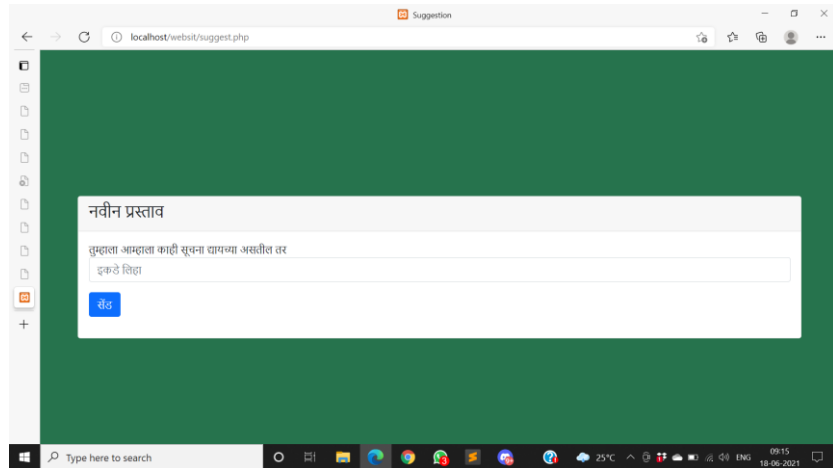

Here it displays all the schemes useful for females. So this was working of the filter search system.

## RESULT

We saw the working of some part of the website in the above section. The schemes can also be filtered on the basis of health, education, employment etc. A suggestion webpage is also created where users can recommend some more useful schemes or some comments/views on the website.

Here are some pictures of the website

These are some web pages of the website which can be accessed by the user.

## CONCLUSION

We saw the working of this website and its use. Users can use it efficiently and find appropriate schemes for them. So this website can help the people who need help and make them aware about different schemes.

## COMMERCIAL UTILITY

Government of India and Government Of maharashtra are making different schemes for welfare of tribal people. These schemes are announced on different occasions and are applicable for different people in the society. Some schemes are applicable for students, senior citizens, special schemes for women, schemes for health, welfare, financial, needs etc. All such schemes are made available on one platform in this website.
